Lab 6: Test Differences and Compare Groups

This self-contained folder contains the runnable R script lab-06-hypothesis-anova.R, the Excel intake/control/evidence workbook lab-06-hypothesis-anova.xlsx, and the required source data under data/.

Use the detailed procedure in the Learner Guide. Run the script from this folder, inspect the files created under outputs/, complete the workbook evidence, and retain the console output.

Acceptance criteria:

- Test choices match the designs, hypotheses were pre-specified, effect estimates accompany p-values, and conclusions state assumptions and practical limitations.
- The R script parses and runs without an unhandled error.
- The workbook opens without a repair prompt and contains no Excel formula errors.
- Findings identify the evidence, magnitude, uncertainty and limitation.

Course: Data Analytics with R (C182), version v1.0.
